|---------------------------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|------|
| Effectiveness of cleaning | ASTM F2179-90 Sec. 4.2 (Mod)             | With a turpentine-soaked cloth, scrub the inside of the jar, then scrub the outside of the jar. All scratches are to be made using sufficient pressure to just penetrate the surface of the glass. Rinse with water at the same room temperature as the glass. Wash is possible, then dry the jar and examine each piece for fractures. Shall show no fractures. Report the number of fractures, if any, for each test.                                                                                                                                                                                                                                                                                                                                                                                                                 | M | PASS |
| Thermal shock             | ASTM F2179-90 Sec. 4.2 (Mod) / ASTM C149 | Modification: expanded scope to all other glass products in addition to candle containers. Shall not crack or break after tested per below:<br>- prepare a cold-water bath at 21±1.1°C (70±2°F).<br>- immerse the sample completely in the hot water bath and allow to soak for 5 min ± 10 s.<br>- transfer the sample to the cold bath, and immerse for at least 30 s.<br>- remove the sample from the cold bath and examine the sample for any cracking.<br>Note:<br>- the hot water that collects within the container during the first immersion shall be retained in the container through the second immersion.<br>- the time of transfer from the hot bath to the cold bath shall be 15 ± 1 s.<br>Modification: sampling procedure not followed and expanded scope to all other glass products in addition to candle containers. | M | PASS |
