In Cupwind, we focus on supplying good quality products with affordable price.

We have our own dedicated QC person to check on quality on site for each order, and we have much more strict QC standard than third parties.

As a professional [premium votive borosilicate candle vessel manufacturer](#), here are some tips on how to properly use a candle and care for the borosilicate candle vessel after the wax has burned out.

When lighting your candle for the first time, make sure to allow the wax to melt all the way to the edges of the vessel. This will help prevent tunneling and ensure an even burn throughout the life of the candle.

Always trim the wick to about 1/4 inch before each use to prevent the flame from getting too large and causing soot or smoke.

Burn your candle for no more than 4 hours at a time to prevent overheating and ensure a longer burn time.

Never leave a burning candle unattended and keep it away from drafts, pets, and flammable objects.

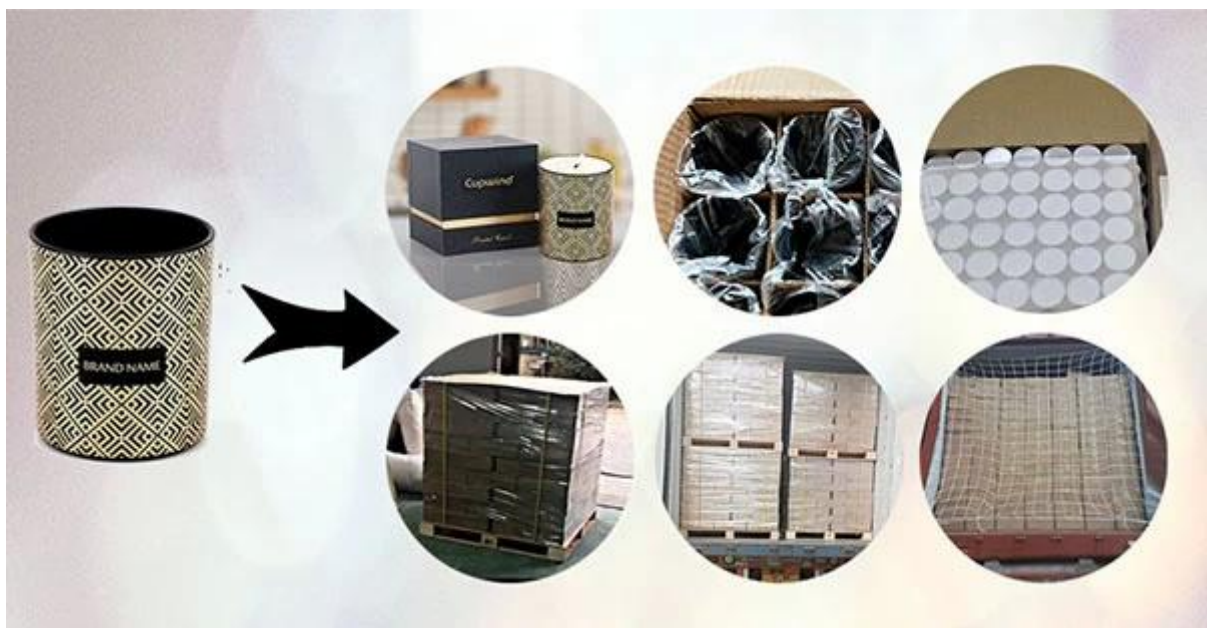

Once the wax has burned out, you can clean the borosilicate vessel by gently scraping out any remaining wax with a spoon or paper towel. Then wash the vessel with warm, soapy water and dry it thoroughly before reusing it or repurposing it.

By following these tips, you can enjoy your candles safely and prolong the life of your borosilicate candle vessel.
